

INTELLECTUAL PROPERTY AND OPEN SCIENCE DECLARATION

The MamaCare AI platform, including the source code, training configurations, and localized triage workflows, is the original work of the MamaCare AI development team. The team retains ownership of the dashboard and few-shot based fine tuning implementation while licensing the system components in accordance with open-science principles.

MamaCare AI is built entirely upon established open-source technologies to ensure transparency, reproducibility, and local hosting capability:

- Machine Learning Architecture: Custom weights are fine-tuned from the open-source distilbert-base-multilingual-cased model checkpoint under the Apache 2.0 License.
- Libraries and Frameworks: Powered by open-source modules, including:
 - Hugging Face transformers, peft, setfit, and datasets (Apache 2.0).
 - React, Vite, Express.js (MIT License).
 - PostgreSQL Database Adapter (PostgreSQL License).

The training pipeline ingests open-science datasets. The team complies with all license terms, ensuring that no proprietary or closed data pools are used without proper authorization, and that the resulting trained weights remain accessible under open repositories.

4. Permission for Prototype Showcase

The MamaCare AI team grants the HASH Innovation Challenge organizers and partner institutions (IDRC, CRDI, Sunbird AI, APHRC, Data Science Africa) full permission to showcase, demonstrate, and host the MamaCare AI prototype and related code repositories for educational, dissemination, evaluation, and future research purposes.
