

AI FOR REPRODUCTIVE HEALTH IN AFRICA INNOVATION CHALLENGE

Sub-Saharan Africa | Multilingual | Open Science

11th May 2026

Harnessing Artificial Intelligence to Advance
Maternal & Sexual Reproductive Health Across the Continent

Innovation Tracks

Track I: Access to Comprehensive Early Pregnancy Loss Care

Track II: Empowering Informed User Decision-Making for
Contraception

Scoring Methodology

A 1-to-5 scale applied to each criterion, multiplied by its assigned weight

Criteria, scoring, and qualitative feedback for assessing solutions

1

Very Weak

Criterion poorly addressed

2

Weak

Limited evidence of meeting the criterion

3

Moderate

Acceptable but needs improvement

4

Strong

Well addressed

5

Excellent

Outstanding and clearly demonstrated

Final score per criterion = **Score (1–5)** × **Weight multiplier**

Evaluation Criteria & Weighting

Seven weighted criteria; weights total 100%

Criterion	Description	Weight	Multiplier
Problem & Solution Relevance	Alignment of the solution with MSRH challenge themes.	15%	× 3
Innovation & Creativity	Novelty of the idea, originality of approach, innovative use of technology.	15%	× 3
Technical Quality	Soundness of analytical methods, algorithms, data processing, or software design.	20%	× 4
Use of Data & Open Science	Effective use of datasets, data quality, and adherence to open science principles (reproducibility, code availability, documentation).	10%	× 2
Potential Health Impact	Likelihood that the solution could improve MSRH outcomes, service delivery, or decision-making.	15%	× 3
Feasibility & Scalability	Practicality of implementing the solution in real health systems and potential for scaling.	20%	× 4
Presentation & Communication	Clarity of final pitch, demonstration, storytelling, and ability to communicate the solution.	5%	× 1
TOTAL		100%	

Weight Distribution at a Glance

Technical Quality and Feasibility carry the heaviest weight

KEY TAKEAWAYS

40% Technical Excellence

Technical Quality (20%) + Feasibility (20%) reward solutions that actually work.

45% Problem Fit

Relevance, Innovation, and Health Impact together emphasize value to MSRH.

15% Data & Delivery

Open science practices and pitch quality round out the rubric.

Qualitative Feedback

Narrative feedback that complements the numeric scores

Teamwork & Collaboration

How effectively did the team work together, divide roles, and integrate diverse skills throughout the hackathon?

Strengths of the Project

What stood out about this solution? Standout features, distinctive approaches, or particularly strong execution worth highlighting.

Areas for Improvement

Where does the solution fall short? Technical gaps, unclear assumptions, design choices to reconsider, or missing elements.

Recommendation

Suggested next step: advance to the next round, refine and resubmit, mentor for development, or archive.

Prizes & Awards

TRACK I

USD 1,350

Cash Prize

Early Pregnancy Loss Care

TRACK II

USD 1,350

Cash Prize

Contraception Decision-Making

WHERE & WHEN WINNERS ARE RECOGNISED

EVENT

Data Science Africa 2026
Workshop

VENUE

Makerere University, Kampala

DATES

23–24 July 2026

BENEFIT

All-expenses-paid trip included

AI FOR REPRODUCTIVE HEALTH IN AFRICA — INNOVATION CHALLENGE

Key Milestones & Timeline
